

Furqaan Nabi

Full-Stack Engineer — Infrastructure, Privacy & Autonomous Systems

hi@furqaannabi.com | github.com/furqaannabi | linkedin.com/in/furqaannabi | x.com/0xfurqaan | furqaannabi.com

PROFESSIONAL SUMMARY

Full-stack engineer focused on infrastructure, privacy, and autonomous systems. Experienced in building everything from private settlement layers to AI-driven protocols, with an emphasis on systems designed to operate at scale, under pressure, and without reliance on centralized control. Multiple-time hackathon winner with over \$43K in combined prizes across leading Web3 ecosystems.

CORE COMPETENCIES

- Full-Stack Engineering.** React, Node.js, and scalable backend systems.
- Smart Contracts & Web3.** Solidity, EVM, and cross-chain development (CCIP).
- Infrastructure & Systems Design.** High-throughput, decentralized architectures.
- AI & Autonomous Systems.** LLM-powered workflows and agent-based execution.
- Cloud & DevOps.** AWS, Docker, and distributed systems.

EDUCATION

Bachelor of Computer Applications

Fintech & AI — Amity University

Expected 2028

TECHNICAL SKILLS

Solidity · React · Node.js · EVM · CCIP · Chainlink CRE · AWS · Docker

SELECTED PROJECTS & AWARDS

SSL — Stealth Settlement Layer

\$10K

1st Place, Privacy Track — Chainlink Convergence

Private settlement layer built with Chainlink CRE, enabling privacy-preserving value transfer verifiable across chains.

RepCheck

\$7K

Winner — QuickNode

On-chain reputation protocol for verifiable trust scoring.

SAVR

\$2.5K

Winner — Lens

Decentralized rotating savings and credit association (ROSCA) system.

Memed.Fun

\$20K

1st Place — Lens Spring

Tokenized meme economy built on the Lens protocol.

ArcFlow

\$2.5K

Track Winner — ETHGlobal HackMoney (Arc)

Yield-generating corporate treasury management system.

DealForge

\$1K

2nd Place — Synthesis (EigenCloud Track)

AI agents that autonomously negotiate and settle deals on-chain.
